

# Custom Butcher Block

Built for Cabinet Professionals

- ✓ Made-to-order sizing
- ✓ Consistent construction standards
- ✓ Wide species selection
- ✓ Commercial project capability

## Face Grain Construction

Face Grain or (Plank Effect) construction consists of random-width boards, flat-sliced to the required thickness. Our standard is 1-3/4" thick or less.

## Edge Grain Construction

Edge grain construction consists of multiple 13/16" thick wooden strips, cut to a desired width, placed on edge and glued together. This style produces a very durable and stable top.

## End Grain Construction

End-grain construction used square or rectangular wooden blocks arranged with the growth rings facing up. This style is generally used for heavy working surfaces.

### Designed for the Trade

- Ideal for kitchens, islands, laundry, retail and commercial millwork.
- Meets client interest in natural materials & finishes.
- Custom quoting support.
- Commercial project capacity.

### Limitations

- Tops produced without splicing up to 140" long.
- Thickness options up to 3"
- No depth restrictions
